If you are looking for a cost effective recording studio or music practice room then this booth is a practical choice. Unlike other booths available on the market, our booth is manufactured using acoustic grade quality **steel** panels, providing the acoustic mass required for enhanced soundproofing and performance. The 50mm thick panel system has a high coefficient of acoustic absorption and would normally be applied when looking to achieve moderate noise suppression (subject to booth location and noise output) the clip together panel system allows easy installation and is lab-tested. Increased panel thicknesses or double walled systems are also available for higher acoustic requirements, please contact us for details.

\* Electrics/Dado not included - for illustration purposes only
